Street to Sovereignty

One person's path from crisis to paid restoration work, and what it has to save the public to pay for itself.

01 **The first conversation**
A worker meets the person where they are. Ninety minutes of safety and trust, no pitch.

02 **The Choice Point**
Two honest paths: stay in the current system, or take a bed tonight. Path B is chosen, never assigned.

03 **MASH Antifragile: three months on the land**
A peer-run camp of 200. Rhythm, work, belonging and the G.A.P.S. practices, beside medical care. $7,500 a stay.

04 **Graduation: the DEEDSPROOF badge**
Nodes graduate together at about Day 90. The door stays open for anyone who falls.

05 **GSRT Earthworks**
Paid river and land restoration at a $22 dignity wage, six hours a day.

06 **Controller and mentor**
Graduates lead the next cohort. The person who was helped becomes the help.

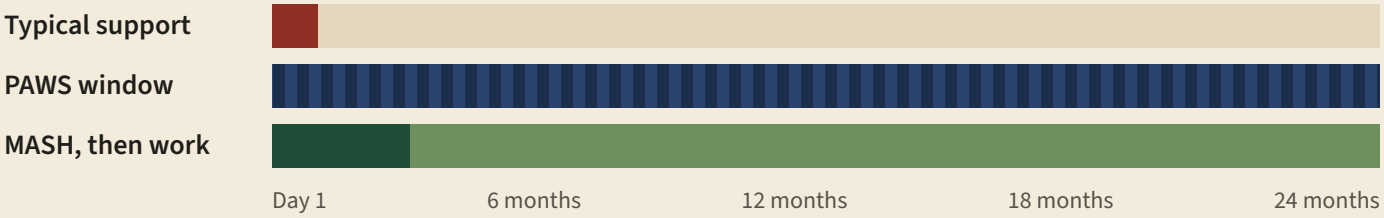

MUSCLE	ANCHOR	REASONS
First Nations: land and knowledge, on the Nation's terms	Church and Government: infrastructure and demand	The money: 40% always goes to participants

The person heals the land. The land funds the healing.

The Discharge Cliff

Most programmes let go at about Day 30. Post-acute withdrawal runs 6 to 24 months. The person falls in the gap, and the public pays for the fall.

THE FIRST 24 MONTHS OF RECOVERY

Red: about 30 days of support. Navy: PAWS can last the whole span. Green: three months at MASH, then paid work at Earthworks with peers.

What one high-needs person costs the public each year

OBSERVED

$120,000

Framework composite. Fits only the chronic, highest-need group; not used as the anchor.

CONSERVATIVE · WORKING FIGURE

$80,000

Two-thirds of Observed. Two-thirds of Calgary's published chronic cost ($134,642) is $89,761.

EVIDENCE FLOOR

$56,000

Peer-reviewed: about $56,000 to $59,000 a year in Canada's largest cities.

Addiction is not the enemy. It was the best available answer to an unmet need for safety, connection and purpose. Change the environment and you change what the person reaches for.

Sources: Latimer E et al., CMAJ Open 2017;5(3):E576 (five-city study). Gaetz S, The Real Cost of Homelessness, 2012 (Calgary 2008 figures). Tracks are never blended. PAWS duration: Gorski (2013).

Meet Marcus

Marcus is a composite case built from clinical case documentation. He is how this dossier shows the whole pathway through one life.

Six crises on Day 1

No fixed address. Rotating shelters, no sleep.

Active PAWS. Fog, cravings, a 6 to 24 month recalibration ahead.

Financial collapse. $733 a month from Ontario Works, no ID, no bank account.

Family separation. His daughter, 6, lives with her grandmother.

Legal mandate. On parole, not yet ready to change.

No sober peers. Every relationship he has runs through using.

> "Two programs. Both times they let me go at thirty days."
>
> Illustrative line, consistent with the case file

His W-score at intake

MEASURE (0–10)	SCORE
R · Resilience	2
B · Boundary clarity	2
N · Neurochemical balance	1
V · Virtue value	3
M · Meaning	2
Gv · Contribution to others	1
Fe · Emotional satisfaction	1
Fm · Moral alignment	2
Sum	**14**
× Cs, secure connection: Disrupted	0.8

II.2 W at intake: a quarter of the burned-out values used in occupational health and safety

W is a wellbeing index, never dollars, and it is never added to cost figures. Marcus's scores are modelled from case documentation, not administered instruments. Source: CMEth Stillwater case file; LRP Marcus ROI workbook.

The First Conversation

A worker meets Marcus where he is. The first 90 minutes aim at safety and trust, not a sign-up.

The 90-minute onboarding

Lifeguard's Life Jacket (G.A.P.S. Between You and Me)

1	**HALT check.** Hungry or hurt, angry, lonely, tired. Meet the need in front of you first.
2	**Ground together.** One slow breath, then 5-4-3-2-1: see, hear, feel, smell, taste.
3	**RAFT snapshot.** Roof, addiction and medical need, fundamentals, his own target.
4	**Name it, don't fuse with it.** "There's a craving swimming in the bowl," not "I am craving."
5	**Offer the Choice Point.** Both paths, honestly. He decides.

Medical first: if he may be withdrawing from alcohol or benzodiazepines, the medical partner sees him before anything else.

The spirit of it

Motivational Interviewing (Miller & Rollnick, 2023) mapped to G.A.P.S.

Partnership	Gratitude
Acceptance	Acceptance
Compassion	Presence
Empowerment	Surrender

ILLUSTRATIVE EXCHANGE

Worker: "You don't have to decide anything today. Can I tell you about two roads, and you tell me what fits?"

Marcus: "Programs kick you out at thirty days."

Worker: "This one runs three months, then paid work. And if you leave, the door stays open."

The first conversation is voluntary and non-coercive. Nothing said here is recorded without consent. Sources: Miller WR, Rollnick S, Motivational Interviewing, 4th ed., 2023; G.A.P.S. Between You and Me practitioner guide.

The Choice Point

Two honest roads. Path B is chosen, never assigned, and anyone can pause and come back at any step.

PATH A · THE CURRENT SYSTEM

Discharge and drift

- Discharge, then navigate alone
- Waitlists and fragmented services
- Emergency rooms, police, shelter cycling
- Public spending that recurs every year
- No asset at the end of it

PATH B · THE RESTORATION PATH

A bed tonight, work after

- A MASH bed the same day, no waitlist
- Three months of rhythm, peers and practice
- Paid restoration work at Earthworks
- Housing, income and a daily structure
- Outcomes measured at 6 and 12 months

Pause and return allowed on both paths, at every stage

WHO PATH B IS FOR (PROPOSED)

- Adults 18 and over
- Homeless or cycling through institutions for 12+ months
- Two or more in the past year: emergency visits, police or court contact, shelter use, a failed discharge
- Medically stable, or stabilized first by the medical partner
- Chooses to come

NOT IN THE PILOT

People under 18, anyone needing hospital-level care, and court-ordered entry. People on parole or probation may still choose to come.

Why the screen matters. Savings concentrate in the highest users: At Home/Chez Soi saved $21.72 per $10 spent for its top 10% of service users.

Source: Mental Health Commission of Canada, At Home/Chez Soi Final Report. The $80,000 Conservative cost on page 18 holds only if this screen actually selects chronic high users.

Day 1: A Bed Tonight

Marcus arrives with nothing and is not asked for anything. By nightfall he has a cot, a crew and someone a few weeks ahead of him.

Arrival	Met at the gate by a Controller. Food and water first.
Within 2 h	Triage Centre: RAFT assessment and medical screening. Withdrawal risk goes straight to the medical partner.
90 min	Stabilization protocol, continuing the first conversation.
Anchor Kit	Journal, practice cards and the return protocol, his to keep.
Node	A tent of 8 participants and 2 Controllers: his crew for three months.
Shadow	Paired with a senior in their final month, who shows him the rhythm.
Night	His first campfire circle. He can listen and say nothing.

WHAT HE IS GIVEN

Bed, food, clothing and gear. No waitlist, no fee. The stay is not waged: paid work starts at Earthworks.

SAFETY FROM HOUR ONE

Naloxone kit in every tent. Medical partner on call. Opioid agonist treatment continues if he is on it.

MEASURED TODAY

Intake W-score, Perceived Stress Scale and recovery capital, with consent.

Medical partner: proposed mobile team or Rapid Access Addiction Medicine (RAAM) clinic, not yet confirmed. Opening depends on it.

The Camp

Two hundred people, twenty tents, one fire that never goes cold.

Concept rendering, not a site photograph.

Layout

20 military tents of 10, rated to −40°C, with heat, CO detectors and lockers

Nodes of 8 participants + 2 Controllers

Mess tent, shower tent, well, chapel tent (optional)

Site

40+ acres, flat or rolling

No open water or cliffs on site

Within 1–2 hours of a hospital; proposed Cobalt / Coleman Township, near Temiskaming Shores

Harm reduction

Triage Centre and Harm Reduction Centre, peer-run with a medical float team

User Area: no one uses alone. Needs a federal s.56.1 exemption or the medical partner's licence before it opens

Gear: The Daily Rhythm

Recovery is not a weekly session here. It is how every hour of the day is built.

WHEN	WHAT HAPPENS	WHAT IT BUILDS
Sunrise	One-Breath Reset. HALT check with a buddy.	Presence
Morning huddle	Beacon Huddle: a 1–10 light-check and "one pattern I noticed."	Gratitude, Acceptance
Morning work	Lean-to building, well upkeep, land stewardship, trail clearing.	Mastery, effort
Midday meal	Cooked together. One gratitude spoken before eating.	Belonging, rhythm
Afternoon	Boxing, drumming, dancing, bingo, skills training, Interruption Book study.	All four
Evening meal	Rotating cooking crews at tribe tables.	Belonging
Night	The Slow Soak: campfire, talking stone, Fish Bowl, Sacred Pause, the tiered curriculum, talisman ceremonies.	All four
Wind-down	One-line journal: "What did today teach me?"	Surrender

Built on the 3-Day Get-A-Way. The retreat's structure is stretched across the three months and repeated in cycles, so the practices become habit rather than an event.

"What it builds" follows the D.O.S.E. explanatory model (dopamine, oxytocin, serotonin, endorphins). It describes why the rhythm is designed this way; it is not a measured result.

Gear: The Four Capacities

G.A.P.S. gives the nervous system a felt experience of secure connection, a natural source of what the drug stood in for.

Gratitude

SEROTONIN · DOPAMINE SECONDARY

Breaks the scarcity loop. One gratitude spoken at every meal; the evening gratitude round.

Acceptance

OXYTOCIN

The observer stance. Fish Bowl circle: "There's grief. I am not grief." Node belonging and family sessions.

Presence

ENDORPHINS

The Sacred Pause between trigger and response. Movement, boxing, drumming; 4-in, 6-out breathing.

Surrender

SEROTONIN · OXYTOCIN SECONDARY

Releasing what was never yours to carry. Asking for help aloud; the Lighthouse Stance; returning without shame.

TAUGHT AT CAMP

Sacred Pause · Fish Bowl · Lighthouse Stance · 5-4-3-2-1 grounding · One-Breath Reset · the Rule of One · the talking stone

WHY IT'S BUILT THIS WAY

Rat Park (Alexander, c. 1980) inspired "change the environment, not just the person." Replications were mixed: it is the inspiration, not the proof.

The neurochemical labels are the locked G.A.P.S. mapping and an explanatory model (D.O.S.E.), not a clinical mechanism claim. Opioids act on the body's opioid receptors; MASH's natural practices sit beside medical treatment, never in place of it.

Gear: Knowing What's Coming

The clinical frameworks tell the clinician what is coming. G.A.P.S. tells the person, in words they can use alone at 2 AM.

Seven PAWS hurdles

Adapted from Gorski (2013)

1 Cognitive fog

2 Emotional overreaction or numbness

3 Sleep disruption

4 Stress sensitivity

5 Cravings and craving confusion

6 Anhedonia: pleasure offline

7 Identity confusion

The 12 Blocks

Relapse warning signs, each matched to a capacity

CAPACITY	BLOCKS IT INTERRUPTS
Gratitude	1 The Drift · 7 The Pit
Acceptance	2 The Mask · 6 The Fire · 8 The Bargain
Presence	3 The Build · 5 The Fog · 9 The Tunnel · 11 The Edge
Surrender	4 The Wall · 12 The Fall

Block 10: [NAME AND CAPACITY TO CONFIRM]

THE UNIVERSAL INTERRUPTION PROTOCOL

1. Name it
2. Ground the body
3. Make contact
4. Apply the capacity
5. Wait it out: cravings crest and pass
6. Document it

A lapse is information, not a verdict: the shame response drives escalation (the abstinence violation effect, Marlatt & Gordon, 1985). Riding out a craving draws on urge surfing (Marlatt & Donovan, 2005). Gorski lists six PAWS symptom groups; the seven hurdles are this framework's adaptation.

Gear: Points and Games

Recovery behaviour earns something real, every day. Play makes the practices stick.

What earns points

- Showing up: huddles, meals, the fire circle
- Completing your role in the node
- Helping someone, especially a newcomer
- Practising the tools and logging it

Points decide graduation order. Nodes graduate together, ranked by points and readiness.

The games

- **Daily Dose** family game
- **Bingo** nights
- **Boxing** and the heavy bag
- **Drumming** and dancing
- **The mudslide**

The evidence anchor

Contingency management: giving tangible rewards for recovery behaviour. It is among the best-supported addiction interventions in clinical trials, especially for stimulant use. The points system is a form of it; the games are how it is delivered, not the evidence.

Points measure participation and contribution. They are not a clinical score and are separate from the W-score.

Gear: Family and Elders

Families are brought in on purpose, coached to make a sober life more rewarding than using.

In Deeper Waters

Structured family sessions that teach loved ones to reward sober behaviour and step back from rescuing.

Grandparents as anchors

Where children are in a grandparent's care, that grandparent becomes part of the plan, not a bystander.

Elder mentors

Retired Elders, 55 and over, mentor at camp and in schools: wisdom handed down, and a role that keeps Elders connected.

> "I want my daughter to see me in that vest."

Marcus, near the end of his stay. His fishing-rod sketch at intake showed meaning was there but out of reach. By Day 88, family court documentation is building.

The evidence anchor

Community Reinforcement Approach (Hunt and Azrin; later Meyers): make a sober life more rewarding than using.

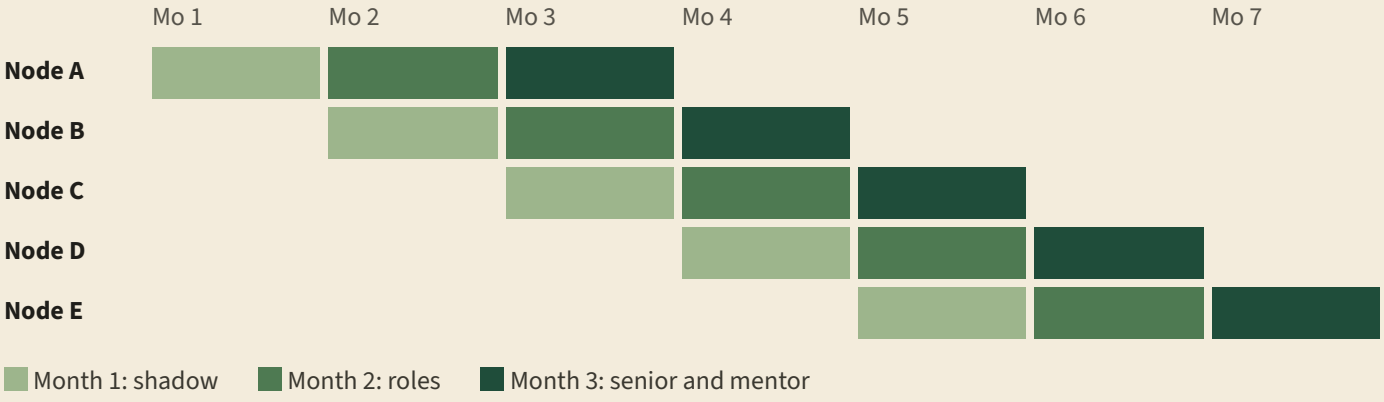

CRAFT, its family version: in a randomized trial it got 64% of loved ones into treatment, against 30% for confrontational interventions and 13% for Al-Anon facilitation.

Source: Miller WR, Meyers RJ, Tonigan JS. Engaging the unmotivated in treatment for alcohol problems. J Consult Clin Psychol. 1999;67(5):688–697. Marcus quote from the case file (composite vignette). Gold tier as Elder mentors: canon update pending.

Gear: Shadow and Seniority

Three months, with the culture handed down person to person. Every newcomer lives alongside a senior in their final month.

ROLLING INTAKE: NODES ARRIVE IN TURN

In Month 3, Node C's newcomers are paired one-to-one with Node A's seniors.

Month 1

Stabilize. Learn to self-regulate by watching someone a few weeks further along.

Month 2

Take on roles, earn points, carry part of the node.

Month 3

Become the senior. Teaching steadies your own recovery and earns seniority.

PRODIGAL SON RETURNS

$$0.5 + 0.25 + 0.125 = 0.875$$

Planning assumption: half return once, half of those again, half again. That is 525 thirty-day return stays a year, inside the same 200 beds. Each returner comes back as a teacher of the relapse cycle, not a failure.

The halving cascade is a design assumption to test in the pilot, not observed data. Bed check: 600 × 90 days + 525 × 30 days = 69,750 of 73,000 bed-days (about 96% full).

Gear: Safety and Medicine

MASH works alongside medicine, never instead of it. Medicine stabilizes the body; MASH changes the need.

Some withdrawals kill

Alcohol and benzodiazepine withdrawal can cause seizures. Anyone at risk is withdrawn under medical care first.

Opioid treatment welcomed

Methadone and buprenorphine reduce deaths. No one is asked to stop to enter.

Naloxone everywhere

A kit in every tent. Every Controller trained.

Exit is the riskiest moment

Tolerance drops in camp. Everyone leaves with an overdose briefing, naloxone and a saved place to return.

Peers, not clinicians

Psychiatric need goes to the medical partner. 9-8-8 and 9-1-1 posted and drilled.

Insurance and privacy

Operator carries its own liability cover. Health records under PHIPA; First Nations data under OCAP®.

WHEN SOMETHING GOES WRONG

Resolved in camp

Mischief, damage, arguments, minor scuffles, rule breaks, keys taken before a car moves. Fish Bowl, repair, mentoring.

Always outside help

Serious injury, an overdose not reversed, sexual violence, weapons, threats. The person harmed decides whether police are called.

The supervised User Area opens only with a federal section 56.1 exemption or under the medical partner's licence; Ontario restricts these sites, so the route is settled before the funding ask. Medical partner proposed, not yet confirmed.

Gear: The App in Two Phases

One app carries the learning through the stay. At graduation, its second half switches on.

PHASE 1 · DAY 1 TO GRADUATION

Camp mode

Lifeguard's Life Jacket: the 90-minute onboarding

Anchor Kit: private, self-directed practice

Pearls from Perils: relapse reframe and re-entry

PAWS map and the 12 Blocks

HALT check-ins

Beachcombing bridge: a shared journal and Co-Breath with the Controller; private tools stay private

→

PHASE 2 · FROM MONTH 3

DEEDSPROOF mode

Builds the graduate's **Palette**: curriculum colour, feelings, personal dimensions

Matches them to Earthworks work, with every score shown

Skipped sections route to a Controller conversation, never a penalty

Flourishing Hooks journal carries on for life

CONSENT FIRST

The participant controls what a Controller sees. Data is never sold or shared with insurers.

BEFORE WORK MATCHING GOES LIVE

Childhood history comes out of the match score, age-gating is reviewed under the Human Rights Code, scoring is fixed, and shared camp tablets are secured.

Status: working prototypes (Beachcombing, Deeds Peak Alignment), not yet reviewed by a privacy lawyer or ethics board. MVP build estimate $200,000–$250,000, to sit inside Year 1 Operations or be funded separately.

Graduation: DEEDSPROOF

At about Day 90 the node graduates together at the Bonding Party. The new arrivals honour the outgoing crew.

THE BADGE

DEEDSPROOF

TRUST · STABILIZE · BEGIN

Pinned by the graduate's Controller. The Covenant is offered, never forced: speak it at the fire, or receive the badge in silence. Both are honoured.

The exit package

Anchor Kit: guide, cards, journal

Keeper's Manual: next year's plan

The Pallet: skills and growth tracker

The badge

The camp number: always answered

Marcus at Day 88

MEASURE	DAY 1	DAY 88
R · Resilience	2	6
B · Boundary clarity	2	5
N · Neurochemical balance	1	6
V · Virtue value	3	6
M · Meaning	2	7
Gv · Contribution	1	6
Fe · Emotional satisfaction	1	6
Fm · Moral alignment	2	6
Sum × Cs	14 × 0.8	48 × 1.0

11.2 → 48.0

+36.8 points. Approaching, not yet at, the Day 90 target of 54. Secure connection moved from Disrupted to Developing.

A LIFELONG, VOLUNTARY JOURNEY

DEEDSPROOF (3 months) → FISHING HOLE (Year 2) → SLOW SOAK (Year 3) → 3-DAY GET-A-WAY (every year, for life)

Marcus is a composite vignette; scores are modelled from case documentation, not administered instruments.

Into Earthworks

The graduate walks into paid work the day after graduation: restoring rivers and land with the same crew structure.

$22
an hour, the dignity wage

6 h
a day, 5 days, 50 weeks

1,500
hours a year

$33,000
a year per person

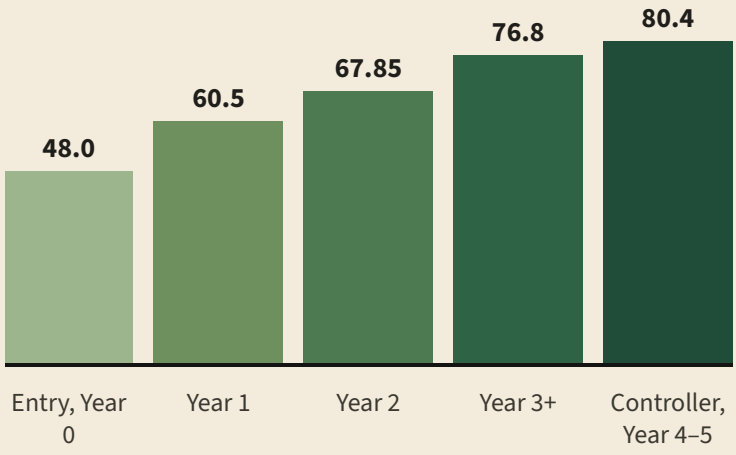

How work is matched

The DEEDSPROOF module builds each graduate's Palette and suggests a crew and role. Safety certification, including WHMIS training, is required at every level regardless of match.

The workforce

200 people in 20 nodes of 8 + 2, on a 40 km corridor. Colour levels from White to Gold mark skill and responsibility.

Marcus's W path (modelled)

Wage math: 6 × 5 × 50 = 1,500 h × $22 = $33,000 (canon locked 25 Aug 2026). W path from the HMA pipeline, corrected edition; Year 1 and 2 use interim Cs values of 1.1 and 1.15, outside the locked 0.8 / 1.0 / 1.2 set and pending canon review. Elder standing (Gold, 55+) is separate from this path.

MASH: The Seed

MASH pays for itself if it avoids about a quarter of what these citizens already cost the public.

Cost of a stay

90 days × $80	$7,200
3 months × $60 clothing	$180
Per 3-month stay (rounded up)	**$7,500**
600 people a year	$4.5M

Returns

525 thirty-day stays × $82/day = $1.29M direct, +$3.23M gross through the waterfall. **About $14.5M a year** at steady state.

The MASH waterfall

STREAM	SHARE	YEAR 1
Participants	40%	$4,500,000
Operations	20%	$2,250,000
Community & Elders	20%	$2,250,000
Progression	10%	$1,125,000
Reserve: next camp	10%	$1,125,000
Gross ($4.5M ÷ 0.40)	**100%**	**$11,250,000**

Break-even: share of current public cost MASH must avoid

Gross cost per person: $18,750 a year ($24,131 with returns)

PUBLIC COST PER PERSON	TRACK	FIRST STAYS	WITH RETURNS
$120,000	Observed	15.6%	20.1%
$80,000	**Conservative**	**23.4%**	**30.2%**
$56,000	Evidence Floor (Latimer 2017)	33.5%	43.1%

The ask: $11.25M for Year 1, rising toward $14.5M as returns build. The 10% reserve, $1.125M a year, seeds the next camp. This supersedes the earlier $3.5M and 18.7:1 figures.

Formulas: GSRT Mathematics Manual v2 (20/40/20/10/10; R = P ÷ 0.40). Sources: Latimer et al., CMAJ Open 2017; Gaetz 2012 (Calgary $134,642 × 2/3 = $89,761). Tracks never blended. $80,000 holds only if the eligibility screen selects chronic high users. Returns use the halving-cascade assumption.

Earthworks: The Numbers

What 200 paid workers cost, compared like for like with what the public already spends on them.

Revenue required

200 people × $33,000	$6.6M payroll
Payroll is the 40% stream: ÷ 0.40	**$16.5M gross**
Operations 20%	$3.3M
Community & Elders 20%	$3.3M
Progression 10% · Reserve 10%	$1.65M each

Assumes 200 is the total workforce, Controllers included. With 40 Controllers on top it is about $17.7M.

The honest test

STATUS QUO, 200 PEOPLE	PUBLIC COST	VS $16.5M
Observed ($120K)	$24.0M	**$7.5M less**
Conservative ($80K)	$16.0M	$0.5M more
Evidence Floor ($56K)	$11.2M	**$5.3M more**

Even with no contract revenue at all, it breaks even at the Conservative track. Every dollar of restoration contracts lowers the public share. **Named contract sources are the open item.**

What restoration is worth: published evidence

+6%
home values near greened lots (peer-reviewed). Other studies: 17% and 30%.

29–38%
lower major-flood cost when wetlands are kept, rural to urban Ontario.

$6 : $1
saved per dollar spent on natural-hazard mitigation.

Sources: Earthworks Revenue Requirement (6-hour day locked 25 Aug 2026). Heckert & Mennis, Environment and Planning A 2012; Wachter, Gillen & Brown, FRB Boston 2008; Penn 2005. Intact Centre on Climate Adaptation 2017. National Institute of Building Sciences 2019. Latimer et al. 2017.

The Lighthouse Resilience Program

Workers who carry this work need a structure that keeps them steady: lighthouses, not rescue boats.

A 20-person team: the model

PER YEAR	OBSERVED	CONSERVATIVE (× 2/3)
Current cost of burnout (T + S + P + H + C) × 20	$306,000	$204,000
Projected cost after a 25% reduction	$229,500	$153,000
Savings	**$76,500**	**$51,000**
Programme cost	$9,238	$9,238
Saved per $1 spent (gross)	$8.28	$5.52
Net return per $1, after the programme is paid for	$7.28	$4.52
Payback	44 days	66 days
10-year savings, no ripple factor	$765,000	$510,000

PUT IN YOUR OWN NUMBERS

The 25% reduction is the pilot's hypothesis. Each agency enters its own costs and measured reduction. At just 10%, the Observed case still returns $3.31 per $1.

REAL-WORLD BENCHMARK

Canadian workplace mental health programmes returned a median $1.62 per $1 in year one, and $2.18 after three years or more.

Formulas: GSRT Mathematics Manual v2, Section 5; audited LRP workbook. Benchmark: Deloitte Canada, The ROI in workplace mental health programs, 2019. Measured with ProQOL, PSS and BAT (validated) plus SAF and OCI (in development). A model, not an observed result; nothing has been piloted yet.

The W Function: Measuring the Person

Dollars tell the funder what changed for the public. W tells everyone what changed for the human being.

$$W = (R + B + N + V + M + Gv + Fe + Fm) \times Cs$$

Eight measures scored 0–10, multiplied by secure connection: Disrupted 0.8 · Developing 1.0 · Secure 1.2

R Resilience
B Boundary clarity
N Neurochemical balance
V Virtue value
M Meaning
Gv Contribution to others
Fe Emotional satisfaction
Fm Moral alignment

What is validated, and what isn't yet

INSTRUMENT	MEASURES	STATUS
ProQOL	Compassion satisfaction and fatigue (workers)	Validated
Perceived Stress Scale	Perceived stress	Validated
Burnout Assessment Tool	Burnout (workers)	Validated
BARC-10 (suggested)	Recovery capital (participants)	Validated
SAF, OCI	Schema activation, observer capacity	In development
W itself	The composite above	Illustrative until piloted

The hard rule: W is never added to dollars and never converted into them. Financial impact and human impact are reported side by side, always separately.

Formula and Cs set: GSRT Mathematics Manual v2, Section 1 (locked). Instruments: ProQOL (Stamm 2010); PSS (Cohen 1983); BAT (Schaufeli et al. 2020); BARC-10 (Vilsaint et al. 2017). W sub-scores will be checked with worker focus groups before external citation.

The Partners: Three Cogs

Proposed roles. No partnership agreements have been signed; each partner defines its own part.

MUSCLE

First Nations

Land stewardship, Traditional Ecological Knowledge, cultural authority and Elder mentorship, on terms the Nation sets.

GSRT does not absorb, rewrite or reinterpret Traditional Knowledge. Taking part never replaces the Crown's duty to consult. Community data follows OCAP®.

ANCHOR

The Church

Infrastructure partner in a servant posture: surplus land, retreat centres, a voluntary chapel tent. It offers, it does not govern.

Grounded in Laudato Si' and the TRC Calls to Action: Call 48 asks faith groups to adopt UNDRIP; Call 49 asks them to repudiate the Doctrine of Discovery.

ANCHOR

Government

The anchor customer: funds the seed and buys verified outcomes, without a seat at the governance table.

Year 1 operating funds up front, then tranches tied to independently verified results. Surplus military tents and Crown land access.

REASONS

The money

Every engine runs the same Justice Floor: 40% participants, 20% operations, 20% community and Elders, 10% progression, 10% reserve to seed the next site.

Sources: Truth and Reconciliation Commission of Canada, Calls to Action 48–49 (2015); Pope Francis, Laudato Si' (2015); First Nations Information Governance Centre, OCAP®. HALO holds the G.A.P.S. intellectual property and licenses it to MASH and Earthworks on written terms.

The Safeguards

The rules written into the firmware, so the system protects people even when no one is watching.

40% wage floor

Participants' share of every engine is fixed at 40%. It cannot be voted down.

Asset lock

On dissolution, assets go to a qualified donee. No one can sell the camp out from under the community.

Elder and Nation authority

Final say on cultural and land decisions, as agreed in writing with each Nation.

Voluntary, always

No court placements. Leave any time; return without shame.

Medicine first

A medical partner is a condition of opening. Opioid treatment and naloxone are part of the camp.

Consent over data

The participant controls who sees what. PHIPA for health records, OCAP® for First Nations data.

Marie Hodge Intercept

Pre-crisis protection: step in before the crisis, not after.

VVV Gate

Values × Virtues × Veterans, the framework's integrity gate.

THE HONESTY RULE

Every figure in this dossier is a model built on conservative published floors, with the track named. Figures become evidence only when the pilot's own measured outcomes replace them.

Governance terms are proposals until adopted by the operating entity (charity, non-profit or Nation-run) and its partners.

Give us a field. We'll show you the data.

This is not a contract. It is a conversation, and a pilot. The door is always open.

The Year 1 ask

$11.25M MASH seed for 600 people, rising toward about $14.5M as return stays build

Surplus military tents from the Canadian Armed Forces

Crown land access: 40+ acres near Cobalt / Coleman Township

A medical partner for withdrawal care and opioid treatment

What a funder gets

Emergency, justice and shelter contacts tracked at 6 and 12 months, with consent

Housing and paid work outcomes for every graduate

Year 1 funds up front, later tranches tied to verified results
